INTERNATIONAL PATENT CLASS (V7): G07F-007/10 ...

... G07F-019/00

...SPECIFICATION in the security of the system.

These and other advantages of the present invention are **satisfied** by a first exemplary embodiment, which pertains to a method used in a financial transaction system capable of using a limited use credit card number which is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of said at least one credit card number and which is associated the master account **number** of a customer. The method **controls** the validity of the **limited use credit card number** and includes the steps of: sending to a customer from a **limited use credit card number** issuer a **limited use credit card number** which is not yet activated; receiving acknowledgment of delivery by the customer of the **limited use credit card number** which is not yet activated; communicating with a **limited use credit card number** card issuer to activate the card before it can be **used** in a transaction; and validating the **limited use credit card** to have associated **limited use** properties. These properties can be such things as a specific time period, a specific merchant...

...determining whether said limited use credit card number has been deactivated because the limited use **condition** has been **satisfied**; transmitting a signal to the merchant denying authorization of the card number if the credit card number has been **deactivated**; transmitting a signal to a master **credit card** issuing facility which issued that **limited use credit card number**, said signal including original transaction details but with the **limited use credit card number** remapped to be a master **credit card number** if said **limited use credit card number** has not been **deactivated**; determining at the whether authorization can be obtained against the master credit card number; authorizing...

...of the transaction based on this determination; remapped any such authorization or denial to the **limited use credit card number** for transmission to the merchant; and transmitting a signal to the merchant authorizing or denying authorization of the **limited use credit card number**.

Further, the present invention provides a method of conducting a settlement transaction including transmitting a...

...can then deactivate the limited use credit card number by the card issuer when a **use - triggered condition** is present. Also, **limited use transaction numbers** can be obtained by authorized users and transactions can be processed within the existing credit...time period, total charge in a single transaction, etc. A common feature is that the **limitation** is based on a use- **triggered condition** subsequent, and not just the expiration date of the card. Stated differently, the a **limited - use credit card number** is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of said at least one credit card number.

The terms "card holder..."

...CLAIMS B1

1. A method of controlling the validity of a **limited use credit card number** (126) in a financial transaction system capable of **using** at least one **limited use credit card number** (126) which is **deactivated** upon a use- **triggered condition** which

occurs subsequent to assignment of the at least one **limited use credit card number** (126) and which is associated the master account number of a customer comprising the steps...

...208) of the transaction at the card issuer's processing system against the associated **limited use** properties; and **deactivating** (210) the **limited use credit card number** (126) by the card issuer when a use- **triggered condition** is present.

6. The method as claimed in any preceding claim further comprising the steps of:

deactivating (320) the **limited use credit card number** (126) by the card issuer when a use- **triggered condition** is present; communicating with the card issuer to reactivate the limited use credit card number...

...system capable of using at least one limited use credit card number (126) which is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of the at least one credit card number comprising the steps of...

...processing system; and determining (1206) whether said limited use credit card number (126) has been **deactivated** because at least one use- **triggered condition** has been **satisfied**.

9. The method of claim 8, wherein the limited credit card number (126) is linked...system capable of using at least one limited use credit card number (126) which is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of the at least one credit card number and which is associated...

...system capable of using at least one limited use credit card number (126) which is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of the at least one credit card number and which is associated...

INTERNATIONAL PATENT CLASS (V7): **G07F-007/08**

...SPECIFICATION card number has been used in a credit card transaction;
 determining whether a limited-use **event** has **occurred** based on the
 notification, and if so, generating a **deactivation** command; and
 invalidating the **limited - use credit card** if a **limited - use**
event has **occurred**, based on the **deactivation** command which is
 generated upon a use- **triggered condition** subsequent. In one
 embodiment, the limited- **use event** is satisfied when the **limited - use**
credit card is **used** only once. In another embodiment, the limited-
use event is **satisfied** when the **limited - use credit card** is
used to accrue charges which are greater than a prescribed monetary
 amount, which are greater than...

...determines whether to invalidate the limited-use credit card number
 based on whether a limited- **use event** pertaining to the **use** of the
limited - use credit card number has **occurred**, and if so,
 generates the **deactivation** command when the limited- **use event** has
occurred; and invalidating the **limited - use credit card number**
 -based on the **deactivation** command for all future transactions except
 refunds.

One advantage of the above-described techniques is...

...CLAIMS means (120) for assigning at least one credit card number (126)
 from said pool of **credit card numbers** (124) to be a **limited -**
use credit card number (126) which is invalidated for all
 future transactions except refunds by a **deactivating** command (210)
 upon a use- **triggered condition** subsequent, which invalidation is
 additional to authorisation of the use which caused the use-
triggered condition subsequent,

and means for associating said master **credit card number** with
 said **limited - use credit card number** (126),

while ensuring that said master credit card number cannot be
 discovered on the basis of said **limited - use credit card**
number (126).

2. A **credit card** system as claimed in claim 1, further comprising:-
means (206) for receiving notification that said...

...has been used in a credit card transaction;

means for determining whether a limited-use **event** has **occurred** based on said notification, and if so, generating the **deactivation** command (210); and

means for invalidating said limited-use credit card (126) if said limited...

...for determining whether to invalidate the limited-use credit card number determines whether a limited- **use event** pertaining to the **use** of the **limited - use credit card number** has **occurred**, and if so, generates said **deactivation** command when said limited-use **event** has **occurred**; and

means for invalidating for all future transactions except refunds the limited-use credit card...

...deactivation command in response thereto, wherein said

determining (718) step determines whether to invalidate the **limited - use credit card number** (704) based on whether a **limited - use event** pertaining to the **use** of the **limited - use credit card number** (704) has **occurred**, and if so, generates said **deactivation** command when said limited- **use event** has **occurred**; and

invalidating the **limited - use credit card number** (704) based on the deactivation command for all future transactions except refunds.

Claims

Claim

... Fig. 11 may include three flags as
follows:

- (i) Don't beep;
- (ii) No move **events** ; and
- (iii) No **event** co-ordinates. Fig. 13 shows a description of each of the
above flags. The above...to the remote reader 1.

5,1 Message Types

There are at least seven message **event** types that can be sent by the
remote reader 1.

These **events** are as follows:

INSERT: When a card 10 is inserted into the remote reader 1, and the card
10 is validated, an INSERT **event** is generated by the remote reader 1
and an associated message is transmitted. This message...

...REMOVE: When a card 10 is removed from the remote reader 1, a
corresponding

REMOVE **event** is generated and a REMOVE message is sent to the
particular
receiver associated with the...

...prior to processing the second INSERT message. Another example of
where a missing message can **occur** is where a hand-held, infrared
connected reader 1, as compared with a wired reader...

...is inserted, then the remote reader 1 is preferably configured to generate a BAD CARD **event** and to send a BAD CARD message. This message allows an associated receiver to take...

...invalid card. PRESS: When a touch is detected by the remote reader 1, a PRESS **event** is generated and a PRESS message is sent to an associated receiver. The PRESS message...press. If there is no card present in the remote reader 1 when a PRESS **event** is generated then a PRESS message is sent containing the special 1 5 "NO-CARD...

...e. eight bytes of zero - 0x00) and the position of the press.
 RELEASE: A RELEASE **event** complements the PRESS **event** and a RELEASE message can be sent in order to inform the application program of the system 600 that a PRESS has been lifted. Every PRESS **event** preferably has a corresponding RELEASE **event**. Readers can allow multiple presses to be registered or provide other **events** that may **occur** between PRESS and RELEASE messages. MOVE: If, after processing a PRESS **event**, the touch position changes by a certain amount then the finger (or whatever is being used to touch the card) is assumed to be moving. MOVE **EVENTS** are generated and MOVE messages are sent until the touch is lifted. MOVE **events** auto-repeat by re-sending the last MOVE messages when the touch position remains stationary...

...53 touch is lifted and a corresponding RELEASE message is sent. Unlike PRESS and RELEASE **events** there is no user-interface object involved with MOVE **events**.
 LOW BATT: A LOW BATT **event** is generated and a LOW BATT message is sent when the battery 53 in the...

...shows the format of the message header that is sent from a remote reader 1. **Service** and **service**-specific identifiers can be **assigned**, by a **smart card** identification authority, to a vendor when the vendor registers a particular service. The service and...

...for example, in a multi-player game. Fig. 20 shows a table listing the message **event** types that have been described above. - 54
 5 2 Simple Messages
 A number of message...

...sends a corresponding INSERT,
 REMOVE, PRESS, RELEASE, MOVE, BADCARD or LOW BAT message to the **event** manager 301 via the I/O daemon 300. As will be described in more detail below, the **event** manager 301 has twenty-one core messages, which are sent to and received from the...to an interrupt every 3.41 seconds. An interrupt service routine increments a counter which **triggers** the suspension to low power mode preferably after about one minute of inactivity.
 6.5...

...the remote reader 1. The microcontroller 44 includes a circuit that detects the power on **condition** and generates a reset.
 6 2 Low Voltage Inhibit (LVI) Reset
 - 57 The LVI reset...

...that the supply voltage has fallen below 2.4 Volts. When this kind of reset **occurs** a Rag is set in a Reset Status Register (RSR) and an initialisation routine can...

...LVI reset. After reset the battery 53 voltage recovers and the LVI reset does not **occur** until the next high current drain. This gives the remote

reader 1 a chance to...

...Opeode Reset

An Illegal Address/Opcode Reset is generated by the microcontroller 44 if it **encounters** either an address out of a predetermined range or an opcode that does not conform to predefined **conditions**. This reset cannot be turned off but should only be in evidence during code debugging ...the system 600 incorporating the software architecture 200. The method 2500 begins after a reset **event**, as described above, has been generated and the method 2500 is executed by the CPU...

...ms routine is performed by the CPU 45, and the method 2500 then returns to **stop** 2501.

6 1 The Initialisation Process

After a reset from any one of the five...

Detailed Description

Claims

Detailed Description

... in the security of the system.

These and other advantages of the present invention are **satisfied** -by a first exemplary embodiment, which pertains to a method used in a financial transaction system capable of using a limited use credit card number which is **deactivated** upon a use-triggered **condition** which **occurs** subsequent to assignment of said at least one credit card number and which is associated the master account **number** of a customer. The method **controls** the validity of the **limited use credit card number** and includes the steps of: sending to a customer from a **limited use credit card number** issuer a **limited use credit card number** which is not yet activated; receiving acknowledgment of delivery by the customer of the **limited use credit card number** which is not yet activated; communicating with a **limited use credit card number** issuer to activate the card before it can be **used** in a transaction; and validating the **limited use credit card** to have associated **limited use** properties. These properties can be such things as a specific time period, a specific merchant...

...determining whether said limited use credit card number has been deactivated because the limited use **condition** has been **satisfied**; transmitting a signal to the merchant denying authorization of the card number if the credit card number has been **deactivated**; transmitting a signal to a master **credit card** issuing facility which issued that **limited use credit card number**, said signal including original transaction details but with the **limited use credit card number** remapped to be a master **credit card number** if said **limited use credit card number** has not been **deactivated**; determining at the whether authorization can be obtained against the master credit card number; authorizing...

...of the transaction based on this determination; remapped any such authorization or denial to the **limited use credit card number** for transmission to the merchant; and transmitting a signal to the merchant authorizing or denying authorization of the **limited use credit card number**.

Further, the present invention provides a method of conducting a settlement transaction including transmitting a...can then deactivate the limited use credit card number by the card issuer when a **use - triggered condition** is present. Also, **limited use transaction numbers** can be obtained by authorized users and transactions can be processed within the existing credit...time period, total charge in a single transaction, etc. A common feature is that the **limitation** is based on a **use-triggered condition** subsequent, and not just the expiration date of the card. Stated differently, the a **limited - use credit card number** is **deactivated** upon a **use-triggered condition** which **occurs** subsequent to assignment of said at least one credit card number.

The terms "card holder...

Claim

... transaction system capable of using at least one limited use credit card number which is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of the at least one **limited use credit card number** and which is associated the master account number of a customer comprising the steps of:
sending to a customer from a **limited use credit card number** issuer a **limited use credit card number** which is not yet activated;
receiving acknowledgment of delivery by the customer of the **limited use credit card number** which is not yet activated;
communicating with a **limited use credit card number** card issuer to activate the **limited use credit card number** before it can be **used** in a transaction; and
validating the **limited use credit card number** to have associated **limited use** properties.

2 The method of claim 1 wherein said limited use properties are one or...
...requesting authorization of the transaction at the card issuer's processing system against the associated **limited use** properties; and
deactivating the **limited use credit card number** by the card issuer when
a use- **triggered condition** is present.

6 The method as claimed in any preceding claim further comprising the steps of:
deactivating the **limited use credit card number** by the card issuer when
a use- **triggered condition** is present;
communicating with the card issuer to reactivate the **limited use credit card number** to be **used** in one or more additional transactions subsequent to the **deactivating** step; and
revalidating the **limited use credit card number** with associated **limited use** properties.

7 The method as claimed in any preceding claim wherein the limited use properties...
...transaction system capable of using at least one limited use credit card number which is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of the at least one credit card number. comprising the steps of:
initiating a transaction by a customer presenting a **limited use credit card number** to a merchant;
routing said **limited use credit card number** to a central processing system; and
determining whether said **limited use credit card number** has been **deactivated** because at least one use- **triggered condition** has been **satisfied**. The method of claim 8, wherein the limited credit card number is linked to an...transaction system capable of using at least one limited use credit card number which is **deactivated** upon a use-

triggered condition which **occurs** subsequent to assignment of the at least one credit card number and which is associated...

...signal from a merchant to a central processing system according to leading digits of the **limited use card number** ; remapping the **limited use credit card number** with the master **credit card number** ; transmitting said remapped master credit card number to issuer processing facility which issued the...

...settling the transaction by payment, if appropriate, to the central processing system; remapping the master **credit card number** back to the **limited use credit card number** ; and transmitting the **limited use credit card number** and payment information, if appropriate, to the merchant.

17 The method of claim 16, wherein...

...transaction system capable of using at least one limited use credit card number which is **deactivated** upon a use- **triggered condition** which **occurs** subsequent to assignment of the at least one credit card number and which is associated...

...which enables communication with a remote access device support server to enable the issuance of **limited use card numbers** .

19 The method of claim 18 wherein the use-triggered conditions include one or more...routlug -said limited use credit card number to central processing system

I
determining whether said **limited use credit card number** has PLO (a
been **deactivated** because **limited use condition satisfied**
emitting a signal to the merchant denyJng
of the card number if **deactivated**
a signal to iWUjMg facility with the **limited use credit card number** remapped if said **limited use credit card number** has IOL Z I E)
not been **deactivated**

I
mining whether authorization can be obtained against the master credit card number or denyiug of the transaction.

I
re ed any such or denial to the 2.1 to **limited use credit card number**

I
a signal to the merchant authonztnng or denylug of the **limited use credit card number**

Detailed Description

Claims

Detailed Description

... embodiment, a technique for performing a credit card transaction based
 on one of a master **credit card number** and a **limited - use credit**
card number is provided, wherein the **limited - use credit card**
number is randomly chosen with respect to the master **credit card**
number , but the **limited - use credit card number** includes

identical formatting to the master credit card number and is associated with the master credit card number. The technique comprises: entering a transaction on the basis of the master **credit card number** or the **limited - use credit card number** to generate a transaction message; and receiving the transaction message and processing the transaction. The...

...of processing the transaction includes: authorizing or denying the transaction; determining whether to deactivate the **limited - use credit card number** when the **limited - use credit card number** was **used** to perform the transaction, and generating a deactivation command in response thereto, wherein the determining step determines whether to deactivate the **limited - use credit card number** based on whether a **limited-use event** pertaining to the **use** of the **limited - use credit card number** has **occurred**, and if so, generates the deactivation command when the **limited-use event** has **occurred**; and **deactivating** the **limited - use credit card number** based on the **deactivation** command.

One advantage of the above-described techniques is that the credit card holder obtains...

Claim

... card number (704) has occurred, and if so, generates said deactivation command when said **limited-use event** has **occurred**; and **deactivating** the **limited - use credit card number** (704) based on the **deactivation** command.

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: An integrated approach is developed for three-dimensional (3D) cone beam reconstruction of cerebral vasculature (both morphology and gray scale) from a **limited number** (4-6) of digital subtraction angiographic (DSA) projections, obtained **using** a standard biplane C-arm X-ray system, using the Algebraic Reconstruction Technique (ART) with non-negativity constraint. The accuracy of ART is improved by determining weights based on the intersection volume between a pyramidal ray and cubic voxel. The input data are segmented and corrected for spatial image distortion. The reconstruction (volume 512/sup 3/) is accelerated by retaining only the voxels containing vasculature (masking), multiscaling, and partitioning the algorithm to run in parallel. Problems in using ART are evaluated. Limited view reconstruction is demonstrated to be unstable. In addition, errors arising from geometric uncertainty, noise, and partial voluming are assessed with simulations. Corrective measures in reconstructions are described and demonstrated with experimental data. Reconstruction of a phantom containing fiducial markers at known locations demonstrated that the reconstructed geometry is accurate to less than a pixel width (0.23 mm). The reconstruction algorithm with corrective measures is tested using a thin wire phantom, and anatomic skull phantom, a human carotid artery, and human cerebral vasculature with an aneurysm. The use of weight norm **cutoff** and averaging ART for different terminal **conditions** is found to be effective. The reconstruction results are also validated with reprojections of the 3D reconstructions. (0 Refs)

Treatment: Experimental (X)

Abstract: Summary form only given, as follows. To measure the radiated power from a high power millimeter wave device it is preferable to perform calorimetry. A calorimeter has been designed and tested for measurements on a 35 GHz gyrokystron amplifier experiment at NRL. The output radiation is in the form of a TE/sub 01/ circular waveguide mode in a highly overmoded guide (operating frequency is more than three times **cutoff**). The final calorimeter design is an inverted cone structure with power absorption by octyl alcohol. Low radiation reflection, mode conversion, and extraneous heat dissipation are obtained. Three levels of analysis are performed. A simple ray tracing theory allows reflection coefficient and mode conversion to be found by replacing the symmetric circular mode with an equivalent rectangular one. A finite difference code based on a planar circuit analysis provides the same information with a more rigorous treatment of the rectangular boundary **conditions**. Finally, HFSS simulations are carried out for a **restricted number** of candidate designs **using** the actual circular structure. Cold test results will be described in additions to details of the calorimeter construction and calibration. (1 Refs)

Abstract: This paper presents a design of motion control systems via $H/\text{sub infinity}$ /-partial state feedback. There are some difficulties such as **limitation** of the plant poles at the origin or pole/zero **cancellations** in the design of motion control with the $H/\text{sub infinity}$ /-mixed sensitivity problem. These difficulties can be solved by using partial state feedback control when the plant internal states are available. Partial state feedback **control**, which **uses** measurable states besides outputs, has the advantage that the **number** of pole/zero **cancellations** can be reduced. (13 Refs)

Language: English Document Type: Journal Paper (JP)

Treatment: Theoretical (T)

Abstract: The evolution of a linear vortex filament close to a rigid

sphere is investigated at high Reynolds **number** . The **limiting** evolution in an ideal flow, is analysed **using** a **cutoff** method and the results are compared with those of a singular vortex approach able to account for a viscous effect on the vortex structure evolution. The computed results show the creation of a closed vortex structure in ideal flow and also, at low Reynolds number, an unrealistic reattachment of the vortex to the surface of the body. The nature of the boundary-layer development, when the no-slip **condition** is satisfied, is calculated near the symmetry plane. The solutions show the development of an unsteady, vortex-driven, separating boundary layer with the three-dimensional separations dependent on the initial distance of the filament from the wall. All the solutions ultimately show a rapid growth of the secondary vorticity field near the surface and suggest an ejection from the boundary layer, followed by a strong viscous-inviscid interaction. (35 Refs)

Treatment: Theoretical (T); Experimental (X)

Abstract: In broadcasting and fixed satellite services with point-to-multipoint or multipoint-to-point modes of operation and employing frequency re-use, it may be technically and economically advantageous to use forward uplink depolarization **cancellation** as a means of minimizing depolarization interference due to precipitation. A **number** of methods for achieving **cancellation** adaptively, **using control** devices in the feed assembly or in an auxiliary path branched from the main transmit path, have been analysed. Their performance has been evaluated under exacting **conditions** of open loop control and their merits are compared. All methods exhibit two degrees of freedom and as such are potentially capable of perfect uplink depolarization control for a single polarization under all prevailing atmospheric **conditions** . Bounds on permissible overall depolarization control error in practical implementation are also included. (18 Refs)

Title: Influence of the Prandtl number on second-order heat transfer due to surface curvature at a three-dimensional stagnation point

Author(s): Gersten, K.; Papenfuss, H.-D.; Gross, J.F.

Author Affiliation: Inst. for Thermo & Fluid Dynamics, Ruhr-Univ., Bochum, West Germany

Journal: International Journal of Heat and Mass Transfer vol.21, no.3 p.275-85

Publication Date: March 1978 Country of Publication: UK

CODEN: IJHMAK ISSN: 0017-9310

Language: English Document Type: Journal Paper (JP)

Treatment: Theoretical (T)

Abstract: The heat transfer at the stagnation point of a body in laminar, incompressible, three-dimensional flow is studied using second-order boundary-layer theory. The body is assumed to have two different principal curvatures at the stagnation point. The influence of the Prandtl number on the Nusselt number, in particular on the second-order terms resulting from longitudinal and transverse curvatures of the body surface, is shown. The **conditions** under which the contributions to the Nusselt number due to the transverse curvature effect and the longitudinal curvature effect **cancel** each other are demonstrated. The two **limiting** cases of very small and very large Prandtl **numbers** are considered **using** a perturbation analysis. Asymptotic expansions are obtained for both limiting cases. (14 Refs)

Title: Photochemical processes

Journal: Transactions of the Faraday Society 27 p.359-572

Publication Date: Aug. 1931 Country of Publication: UK

Language: English Document Type: Journal Paper (JP)

Abstract: A general survey of the subject comprising 27 papers, together with general discussions on them by various contributors, arranged under four main headings as follows:-PART I. MOLECULAR SPECTRA IN RELATION TO PHOTOCHEMICAL CHANGE."Introductory Paper," by R. Mecke . A review of the situation of band spectroscopy with reference to photochemical reactions. Three possibilities exist for a photochemical reaction: (1) With excited molecules; these show no peculiarities in the absorption spectrum in the

appropriate region, gases, for instance, showing spectra with the usual line structure and fluorescing power. The primary reaction must be bimolecular, the quantum yield being usually small and dependent on pressure. The small quantum yield from short-lived (10 SUP -8 sec.) excited molecules or atoms may be improved by exciting metastable (long-lived) molecules or atoms, or by making use of resonance effects. (2) With primary dissociated molecules; recognised by the continuous spectrum (with gases), often preceded by an ordinary band spectrum with a convergence limit, and by loss of fluorescence. (3) With predissociated molecules; these showing suddenly, within a relatively small spectral region, diffuseness in the band spectrum, and loss of the fluorescent power. The molecules have a greatly increased tendency to dissociation (mean life ~ 10 SUP -11 sec.), and thus act exactly as primarily dissociated molecules. "Photochemical Ozone Equilibrium in the Atmosphere," by R. Mecke. Excluding electric discharges in the upper atmosphere, of which practically nothing is known, the ozone layer at high altitudes must be due to a photochemical reaction. On this assumption it is shown that the photochemical decomposition of ozone by ultra-violet light below λ_{2655} is a primary reaction, whilst the formation of ozone requires excited oxygen molecules. Thus the two primary photochemical reactions leading to an equilibrium of O SUB 3 are: O SUB 3 + hv (λ_{2655}) = O SUB 2 + O' and O SUB 2 + O SUB 2 " (λ_{2025}) = O SUB 3 + O', excited atoms being the end products in each case. At very low pressure and low ozone concentration, the law of equilibrium concentration $[O \text{ SUB } 3] \text{ SUP } 2 / [O \text{ SUB } 2] \text{ SUP } 3 = K$ is obeyed. An expression connecting the maximum O SUB 3 concentration with the atmospheric pressure at which this exists is deduced, and application to this of experimental data gives the value ~ 2.1 SUP -4 c.c. per c.c. of air for the maximum concentration. "Ultra-Violet Absorption Spectra of Acetylene and Formaldehyde," by G. Herzberg. Investigation of these spectra with a 2 m. vacuum spectrograph shows that both molecules exhibit two regions of discontinuous absorption corresponding with two stable excited electronic levels of the molecules. The longer wave-length system of formaldehyde has already been observed by Henri and Schou [see Abstract 1928A03225], whose vibrational analysis is now corrected. The vibrations and photochemical processes in the different states of these molecules are discussed. "Absorption Spectra and the Optical Dissociation of Hydrides of the Oxygen Group," by C. F. Goodeve and N. O. Stein. The absorption spectra of the four hydrides of the oxygen group exhibit thresholds or regions of rapidly increasing extinction coefficients. These regions shift progressively towards lower frequencies on passing down the series from water, and the corresponding energy just suffices to dissociate the molecules into hydrogen molecules and SUP 1 D non-metallic atoms. Otherwise H SUB 2 S and H SUB 2 Se are the only two that show great similarity. Second thresholds shown by H SUB 2 O and H SUB 2 Te and attributed to the production of the SUP 1 S non-metal atoms do not occur with the other two gases. The thermochemical heat of dissociation of H SUB 2 Te is evaluated on the assumption that the threshold of absorption of this substance corresponds with the same primary photochemical action as with the other hydrides; the **conditions** involved in this assumption are discussed. In the Discussion on this paper, G. Herzberg regards it as unlikely that, by light absorption in one process, the normal H SUB 2 molecule is split off from these hydrides, as the H atoms are not bound together in them. He considers the agreement of the threshold frequency with the energy necessary for such process to be fortuitous. Replacement of the incorrect values used for the heat of dissociation of O SUB 2 and the energy of the metastable SUP 1 D level of O by the correct values invalidates the authors' photochemical interpretation of the continuous absorption spectrum. This first continuous absorption spectrum of H SUB 2 O more probably corresponds with the dissociation H SUB 2 O --> H+OH (normal). The formation of S from H SUB 2 S in consequence of light absorption is then explainable thus: HS+HS = H SUB 2 S+S. "Photochemical Properties of the

first type the sensitiser is present in only very small amounts, and works as a photocatalyst for a large number of reacting molecules, the photochemical efficiency being very great, and gamma is much greater than 1. Examples are the colour sensitisers of the photographic emulsions, Hg atoms in the experiments of Caro and Franck, Taylor, Marshall, etc.; the sensitising effect commonly passes through an optimum and then decreases with increasing concentration. Sensitisation of the second type, comprising those by chlorine, etc., require a large excess of the sensitiser. Acetone is a sensitiser of this type, as is shown by the results of examining the photochemical transformation of o -nitro-benzaldehyde into o -nitrosobenzoic acid. PART IV. PHOTOSYNTHESIS. "Introductory Address," by E. C. C. Baly . The preparation of catalysts for the synthesis of compounds of the nature of carbohydrates by the action of visible light on CO SUB 2 solution is described. With various ferric oxide mixtures supported on kieselguhr, maxima and minima of photosynthesis occur at the maxima and minima of surface potential, but the yields are only very small, owing to the difficulty of treating the kieselguhr so as to prevent the liberation of alkali. "Application of the Photochemical Equivalent Law to Vital Processes," by O. Warburg . If, in a photochemical process, the absorbed radiant energy Q is measured, the number of absorbing molecules Q/ hv is obtained according to the quantum theory. By setting the number of reacting molecules equal to that of absorbing molecules (Einstein), the number of photochemical primary processes is obtained. This principle is applied to: (1) Assimilation of CO SUB 2 in green cells. This takes place by combination of four elementary reactions, i.e. , in four stages. The percentage energy efficiency is 65 for wave-length 660, 57 for 578, and 43 for 436 mumu. (2) Chemical constitution of the respiratory ferment. This catalyst behaves like an iron carbonyl compound, giving off CO on exposure to light. "Photosynthesis in Tropical Sunlight," by N. R. Dhar, G. Rao and A. Ram . Formaldehyde may be obtained from CO SUB 2 and H SUB 2 O in presence of various inorganic and organic photocatalysts and sunlight, traces of glucose being also formed in some cases. Polymerisation of formaldehyde to reducing sugars has been effected in presence of photocatalysts like ferric chloride, nickel carbonate and chlorophyll. A few cases of synthesis of complex nitrogenous compounds are also reported and a new hypothesis for explaining the mechanism of photosynthesis is advanced. "Measurement of Ultra-Violet Radiation, especially of the Physiologically Active Ultra-Violet (which produces Erythema) by Means of the Photochemical Formation of Triphenylmethane Dyestuffs from the Leuco Compounds," by E. Weyde and W. Frankenburger . The photochemical rearrangement of the leuco compounds of crystal violet may be used for the determination of ultra-violet radiation for two different purposes: (1) For a laboratory method, the pure alcoholic leuco cyanide is very suitable. The amount of dyestuff photochemically formed is, up to a certain degree of conversion, proportional to the intensity of the radiation to be measured. For wave-lengths 2537 and 3130 A. the quantum efficiency is 1. (2) For the doctor, meteorologist, etc., the leuco sulphite solution, with an addition which reverses the dyestuff formation, is suitable for measuring the physiologically active ultra-violet.

The purpose of this study was to investigate the impact of an intelligent computer-assisted instructional (ICAI) tutoring system on the spelling knowledge of students with learning problems. To do this, four pairs (2 male and 2 female) of learning- **disabled** students were matched for age, sex, aptitude, and reading and spelling achievement were instructed in spelling for four weeks (45 minutes a day, five days a week) on two versions of a microcomputer instructional program (SPELLDOWN and LOBO). After becoming familiarized with the instructional environment, one subject from each matched pair was randomly assigned to the instructional treatment **condition** to begin the study. Corresponding matched subjects began instruction using the control version of the program. All subjects then alternated treatments on a weekly basis for the remaining three weeks of the study. At the beginning of each week, each pair was presented with a new 10 word spelling list that contained regular words and highlighted specific phonetic features. Pre-instructional assessment indicated the phonetic features that were problematic for students in each matched pair. One version of the instructional program (SPELLDOWN) included elaborated correction subroutines featuring scaffolded and faded cues customized to fit student's individual responses. The control version of the program (LOBO) was designed to mimic drill and practice routines typical of classroom spelling instruction.

Analysis of the results may be interpreted to suggest that the instructionally enhanced version of SPELLDOWN produced improved quality in student's spelling errors as well as increases in the **number** of words correctly spelled relative to performance attained **using** the **control** version of the program.

NUMERICAL SIMULATION OF A THREE-DIMENSIONAL CHEMICAL LASER FLOW FIELD INCLUDING RADIATION PRODUCED BY LASER INDUCED FLUORESCENCE

Author: LANKFORD, DENNIS WILLIAM

Degree: PH.D.

Year: 1983

Corporate Source/Institution: THE UNIVERSITY OF NEW MEXICO (0142)

Source: VOLUME 44/11-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3461. 270 PAGES

Descriptors: ENGINEERING, AEROSPACE

Descriptor Codes: 0538

Chemical lasers typically derive power from the reaction of two gas streams inside a laser cavity. **Operation** at optimal laser efficiency requires detailed understanding and **control** of a **number** of energy

transfer processes. The requirement to minimize collisional **deactivation** in chemical lasers has resulted in mixing the cavity gases supersonically. Mixing of the gases at typical cavity **conditions** is predominantly by molecular diffusion and is quite slow compared to the gas velocity.

Enhancing mixing of the gas streams has more than doubled the power from diffusion limited chemical lasers. This enhanced mixing was obtained by perturbing the laser cavity flow field by injecting jet streams into the flowing gases. A detailed understanding of this enhanced mixing process should lead to optimal laser design.

Work reported in this dissertation has produced a time-dependent three-dimensional numerical solution of the Navier-Stokes equations capable of analyzing laser cavity flows with enhanced mixing due to injection jets, i.e. trip jets. Also developed was a numerical model of a new laser flow visualization technique, laser induced fluorescence (LIF). This model simulates the yellow, orange, and red radiation pattern produced by LIF when I(,2) is used as a trace molecule. These numerical programs were used to analyze an experimental laser flow field. Results of the analysis compared well with measured pitot pressure scans and LIF photography.

Details obtained from the numerical technique included the complete three-dimensional velocity, density, specie concentration, mach number, pressure, temperature, and energy fields. A detailed understanding of the mixing process in chemical lasers was obtained. The phenomena which increases the mixing in a laser cavity with trip jets is a distortion of the gas streams which increases the surface area across which diffusional mixing occurs.

THE RELATIONSHIP OF THE MOTHER'S NEGATIVE LIFE EXPERIENCES AND SOCIAL SUPPORT TO THE RESTRICTIVE DISCIPLINE AND ENVIRONMENTAL STIMULATION OF HER DEVELOPMENTALLY DISABLED CHILD

Author: BRANDT, PATRICIA ANN

Degree: PH.D.

Year: 1981

Corporate Source/Institution: UNIVERSITY OF WASHINGTON (0250)

Source: VOLUME 42/12-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 5060. 176 PAGES

Descriptors: EDUCATION, PSYCHOLOGY

Descriptor Codes: 0525

The purpose of this study was to: (a) investigate whether negative life **events** and limited social support influence the use of restrictive discipline of the mother toward her developmentally **disabled** 6-month to 3-year-old child and her provision of environmental stimulation to the child, and (b) obtain reliability and validity estimates on the Personal Resource Questionnaire (PRQ) developed to measure social support. The subjects were 91 mothers of developmentally **disabled** children. Questionnaires were completed which requested demographic information and responses to each of the following measures: Life Experiences Survey--negative life **events** ; PRQ--number of resources (PRQ-1) and perceived support (PRQ-2); CAPP Measure: Ways Parents Handle Irritating Child Behaviors--restrictive discipline; and the NCAST HOME--environmental stimulation. Stepwise multiple regressions revealed that the PRQ-1 and PRQ-2 and not negative life **events** (NEG), explained restrictive discipline, $F(1, 83) = 6.63$ and 5.34 , $p < .05$, respectively. The

combination of PRQ-1 and PRQ-2 accounted for 9.3% of the variance in restrictive discipline scores. In addition to the NEG score, a score was obtained using a cluster of nine negatively scored psychosocial items (PERS NEG), obtained from the negative life **events** measure. In a regression equation with PRQ-1 and PRQ-2, PERS NEG explained 5.6% of the variance in restrictive discipline, $F(1, 84) = 5.44, p < .05$. PRQ-1 increased the amount of variance accounted for to 10.4%, $F(1, 84) = 4.49, p < .05$. Mothers with higher scores on PERS NEG and a higher **number** of resources were more likely to **use** a higher **number** of **restrictive** discipline techniques. PRQ-1, **number** of resources, appears to be measuring network density. Having a greater quantity of resources was costly rather than supportive. Stepwise regression showed that there was no evidence of a significant relationship between the combination of PRQ-1, PRQ-2 and NEG or PERS NEG and environmental stimulation. Content validity of the PRQ was supported and a high internal consistency reliability (.905) was established for the PRQ-2. Validity coefficients indicated that PRQ-1 had a small effect in explaining the variance of restrictive discipline and no effect for environmental stimulation. PRQ-2 was not an effective predictor for either criterion.

FIELD DEPENDENCE AND LEARNING DISABILITIES: A DEVELOPMENTAL APPROACH

Author: EPSTEIN, FREDDA

Degree: PH.D.

Year: 1980

Corporate Source/Institution: YESHIVA UNIVERSITY (0266)

Source: VOLUME 41/04-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1536. 187 PAGES

Descriptors: PSYCHOLOGY, DEVELOPMENTAL

Descriptor Codes: 0620

The present study investigated whether black and Hispanic, lower socioeconomic status learning **disabled** students are more field dependent than are nonlearning **disabled** students, and whether the developmental pattern of increased field independence with age, which has been observed in the normal population, exists within the learning **disabled** population.

It was hypothesized that third and sixth grade learning **disabled** students are more field dependent, as defined by performance on the Portable Rod and Frame Test and the Block Design subtest of the WISC-R, than are matched controls, and that degree of field dependence is related to severity of learning disability. It was further hypothesized that there is an interaction between learning disability/nonlearning disability and age, that sixth grade control subjects are more field independent than are third grade controls, while sixth grade learning **disabled** children are not more field independent than third grade learning **disabled** children. In addition, it was hypothesized that performance on the two experimental measures is significantly related.

Four groups of 20 subjects each, matched for intelligence and sex, were used, third and sixth grade learning **disabled** and control. Each subject received both experimental measures, the PRFT and Block Design.

Data were subjected to a Multivariate ANOVA, as well as separate 2 x 2 (group x grade) ANOVAs for the Block Design and PRFT data. In addition, correlations were computed between each experimental measure and achievement, and between the two measures.

The results of the present study were as follows: (a) The hypothesis that learning **disabled** children are more field dependent than matched controls was supported for grades 3 and 6 by the MANOVA and by the ANOVA of Block Design scores. For the PRFT, Hypothesis 1 was supported for the sixth, but not for the third, grade. (b) The hypothesis that sixth grade control group children are more field independent than are third grade control group children was upheld by the results of the MANOVA and the ANOVAs of Block Design and PRFT. (c) The hypothesis that sixth grade learning **disabled** children are not more field independent than third grade learning **disabled** children was supported by the MANOVA and the ANOVA of PRFT data. However, Hypothesis 3 did not receive support from the analysis of Block Design scores. (d) The hypothesis that degree of field dependence is related to severity of learning disability was supported by results of the Block Design measure, but not the PRFT. (e) The hypothesis that performance on the two experimental measures is significantly related received support for only the sixth grade control group.

Results were interpreted as providing support for the view that learning **disabled** children were less able to rely on internal or independent cues or judgment when they are faced with conflicting information, and tend to respond based on the structure of a situation on their own. The argument that learning **disabled** children fail to proceed at a normal rate of development also received support from the present study. In addition, it was concluded that the Block Design subtest of the WISC-R is not an adequate measure of field dependence, and that individual assessment remains essential in the diagnosis and remediation of learning disabilities.

Limitations related to the nature of the measuring instruments used, the **restricted** ethnic sample, and the **limited number** of subjects. Research suggestions also included a focus on the relative effectiveness of educational techniques geared toward field dependent and independent students, as well as investigation of the relationship between field dependence and other constructs found to discriminate between learning **disabled** and nondisabled students.

Qualified immunity: Ignorance excused
Armacost, Barbara E
Vanderbilt Law Review v51n3 PP: 583-680 Apr 1998
ISSN: 0042-2533 JRNL CODE: AVLRL
WORD COUNT: 52638

...TEXT: will be deemed 'on notice' of that clear law and qualified immunity will likely be **denied** .164

The prominence of notice in the qualified immunity analysis¹⁶⁵ is striking compared to the...suppose a damages action invokes a "new" constitutional rule¹⁸⁷⁸⁷ that was only recognized after the **events occurred** that gave rise to the constitutional damages suit. For example, in Pembaur v. City of ...

...law. In the words of the Harlow Court: "If the law at [the time the **events occurred**] was not clearly established, an official could not reasonably be expected to anticipate subsequent legal...lawfulness.³³ In

Fourteenth Amendment discrimination cases, courts routinely presume knowledge of the law-and **deny** qualified immunity-based on precisely that reasoning.²³⁴ For example, in *Wade v. Hegner*, the...

...black parent) sued the white principal of an all-white Chicago public school for allegedly **denying** admission to the plaintiffs six children.²³⁵ The principal, who had reassured white parents that...of illegality is unnecessary to ensure against liability without fault and qualified immunity will be **denied**.²⁹

It must be noted, however, that to satisfy the requirement of fault, and avoid...he was bound hand and foot in a padded cell."²⁶⁵ Likewise, the courts have **denied** qualified immunity under the following circumstances on the ground that "prison officials who deliberately ignore...

...related complications;²⁶⁷ where a paraplegic was forced to live in squalor because he was **denied** the use of a wheelchair;²⁶⁸ where a prison pharmacist arbitrarily refused to fill an...with clearly analogous facts," that official will be deemed blameworthy and qualified immunity will be **denied**.³⁰⁷ This "particularity" requirement is, of course, not peculiar to qualified immunity in the First...court held the employer immune on several grounds: First, the law at the time the **events occurred** was unclear as to whether an employee's speech is protected when he speaks as...the employer's believed otherwise.³³² Similarly, in *Roth v. Veteran's Administration*, the court **denied** qualified immunity to defendants who allegedly demoted the plaintiff in retaliation for reporting wastefulness, mismanagement...an ex post balancing of interests will not have been obvious at the time the **events occurred**. In the latter case, qualified immunity will be necessary to ensure that only blameworthy defendants...

...egregious-in other words it contains indicia of its own blameworthiness-qualified immunity will be **denied** regardless of whether there is factually-analogous precedent. This prediction is borne out in the ...

...fleeing or actively resisting arrest, and was not engaged in assaultive behavior.³⁷¹ The court **denied** qualified immunity without requiring "a precisely analogous case," reasoning that "[i]t would create perverse...detering constitutional violations under section 1983).

16. The Supreme Court made precisely these arguments in **denying** qualified immunity to municipalities. See *Owen v. City of Independence*, 445 U.S. 622, 651...¹¹⁹.

Footnote:

41. One of the major contributions of the Model Penal Code was its **use** of a **limited number** of carefully defined culpability terms-purpose, knowledge, recklessness, and negligence-to replace the myriad and...whether she had remarried); *Walker v. Superior Court*, 763 P.2d 852, 872 (Cal. 1988) (**denying** a due process challenge to a conviction for child abuse of parents who failed to...discussing legislative immunity). Qualified immunity is the default rule for such officials when they are **denied** absolute immunity under the functional analysis. See generally SHELTON H. NAHMOD, CIVIL RIGHTS AND CIVIL...so obvious that a reasonable person would necessarily have known about it.") (citations omitted), cert. **denied**, 117 S. Ct. 958 (1997). 223. See supra notes 65-68 and accompanying text.

224...of race); *Bator v. Hawaii*, 39 F.3d 1021, 1027, 1028-29 (9th Cir. 1994) (**denying** qualified immunity on the ground that a reasonable official would have understood that subjecting a...

...S. v. Santa Rosa City Schools, 890 F. Supp. 1452, 1472 (N.D. Cal. 1995) (**denying** qualified immunity because a ...a statute or regulation by a state official is per se unreasonable conduct that would **deny** the official qualified immunity).

241. See Parratt v. Taylor, 451 U.S. 527, 543 (1981) (**denying** petitioner relief under 42 U.S.C. 1983 for injury resulting from the negligent acts... nor quasi-suspect under clear law).

Footnote:

After Croson and Adarand, courts have tended to **deny** qualified immunity in cases challenging affirmative action in areas such as employment and contracting. For example, in Alexander v. Estep, 95 F.3d 312, 317-18 (4th Cir. 1996), cert. **denied** sub nom. Prince George's County v. Alexander, 117 S. Ct. 1425 (1997), the Fourth Circuit **denied** qualified immunity, citing case law that should have led county officials to conclude that their...his cell, or take advantage of his limited out-of-cell time because he was **denied** the use of a wheelchair. See id. at 187. The court concluded that "the squalor in which Weeks was forced to live as a result of being **denied** a wheelchair was clearly foreseeable by [prison officials]" and that "jail employees should have been...

...461; see also Cummings v. Roberts, 628 F.2d 1065, 1067-68 (8th Cir. 1980) (**denying** qualified immunity where prison officials deliberately **denied** access to medical care and refused to carry out treatment prescribed by physicians). 270. See...
...permitted to fly until his medical condition had stabilized. See id. at 1064. The court **denied** qualified immunity. For a discussion of the court's reasoning, see supra text accompanying note 266. See also White v. Napoleon, 897 F.2d 103, 106-10 (3d Cir. 1990) (**denying** qualified immunity where defendant used painful ineffectual treatments which had serious accompanying risks); Hunt v...

...that prison officials are "deliberately indifferent to a prisoner's serious medical needs when they **deny**, delay, or intentionally interfere with medical treatment").

Footnote:

271. See Scher v. Engelke, 943 F...

...1987)))).

272. See Nelson v. Overberg, 999 F.2d 162, 165-66 (6th Cir. 1993) (**denying** qualified immunity to prison officials who failed even to investigate an inmate's claim that...

Matching MCBS and Medicare data: The best of both worlds

Eppig, Franklin J; Chulis, George S

Health Care Financing Review v18n3 PP: 211-229 Spring 1997

ISSN: 0195-8631 JRNL CODE: HCF

WORD COUNT: 8276

...TEXT: BACKGROUND

The MCBS is an ongoing household panel survey of approximately 12,000 elderly and **disabled** persons eligible for Medicare benefits.1 Field work for the MCBS began in September 1991...

...population covered. The Access-to-Care files represent the "always enrolled," that is, elderly and **disabled** Medicare beneficiaries entitled to Medicare for the entire calendar year. This enrollment concept excludes persons...made not to always disaggregate to the most fundamental level, but instead to match bundled **events** in the ways that they naturally **occurred** in both files. The practical effect of this approach is to concentrate more on getting...

...and proceeding to less restrictive. For example, reported doctor visits are initially compared with carrier **control number**, date of **service**, and total charge. If there is no successful match, the algorithm checks for a match...identified. However, as noted earlier, the MCBS match structure expects unmatched Medicare bills (which represent **events** that **occurred**

but were not reported in the survey) and unmatched survey reports (which represent health care...

Countdown to July 1992: Nine Steps Toward ADA Compliance
Peteros, Karen H.
Human Resources Professional v4n2 PP: 8-11 Winter 1992
ISSN: 1040-5232 JRNL CODE: HUR
WORD COUNT: 2358

...TEXT: Americans with Disabilities Act (ADA) of 1990, relating to employment, represents a national legislative consensus: **Disabled** persons are entitled to equal access to employment opportunities, and employers must help them overcome...

...to 24 employees have to July 26, 1994 to comply.

Employers should not take the **conditions** of the law lightly. In fact, employers should expect to **encounter** more frequently persons with disabilities who are willing to assert their rights. With enactment of...

...advertising or publicizing an employment opportunity or benefit in a way that tends to discourage **disabled** persons from applying for the job. The ADA also prohibits employers from participating in a contractual or other relationship that has the effect of subjecting qualified **disabled** applicants to discrimination. This means that the employer cannot discriminate indirectly by maintaining a relationship...

...from asking prohibited questions in an interview. Furthermore, because the ADA prohibits employers from preventing **disabled** persons from making an application, employers should also ensure that their facility and application process is accessible to **disabled** applicants.

5. UPDATE AND RESTRUCTURE JOB DESCRIPTIONS. As mentioned above, the ADA protects persons with...

...or occasional if, for example, a duty is the reason the job exists, if a **limited number** of **employees** are available to perform it, or if the

function is ...and acquiring modifying equipment, devices, or a personal assistant. If an accommodation would enable the **disabled** person to perform the essential functions of the job, and would not impose an undue ...

...qualified person for the job. The ADA does not require employers to give preference to **disabled** persons. It does, however, require them to give full consideration to a **disabled** person's application. This means that the employer must give the **disabled** person's application the benefit of a reasonable accommodation inquiry in determining whether the applicant...

...TESTS. The ADA prohibits selection practices that screen out or tend to screen out the **disabled**. To ensure that selection practices do not violate the ADA, employers should review their qualification...

...individuals with a disability in any aspect of employment. This means that employers must offer **disabled** employees equal access to the same jobs, benefits, policies, and plans that are available to...

...accessible, but must also make breakroom and lunchroom facilities and training opportunities accessible to its **disabled** employees. Likewise, an employer cannot ask or require a **disabled** employee, or employee whose child or spouse is **disabled**, to waive or take lesser health and welfare benefits. Employers should review their facilities and major life activity, * do not know what accommodations are available for the **disabled**, and * do not know how to determine if an accommodation would create an undue hardship...

Consumer Advocate Urges Congress to Put Cap on Card Rates
American Banker - June 11, 1987; Pg. 7; Vol. 152, No. 113
WORD COUNT: 3,731

BYLINE:
By Alan Fox

TEXT:
...should enact a
credit card interest cap that would rise and fall flexibly with market
conditions. Alan Fox, legislative representative for the Consumer
Federation, argued in favor of such legislation in... existence of
competition. A
large number of providers constitute a necessary, but not a sufficient,
condition for a competitive market.
Competition is imperfect in all markets for consumer credit because
of...

...are posted by lenders rather than set by the market
interaction of supply and demand **conditions**."
'No Economic Justification'

A month later, at a full Senate Banking Committee hearing, Sen.
Proxmire...

...of Virginia."

Credit cards, as well as other forms of open-end credit, present some
conditions that make competition even more difficult than for other forms
of credit.

Annual fees lock arguments to **restrict** the **use** or availability of
credit
cards. But they do point to reasons why the market functions differently,
and less competitively, than for other forms of consumer credit. Public
policy should take these **conditions** into account and not simply rely on a
market that does not exist.

Lack of...

...Lending Act disclosure
requirements with respect to open-end credit to require that all the
conditions of credit cards be spelled out to a consumer in all
promotional
material that includes...

...still cannot
compare the dollars and cents costs of different credit cards. A variety
of **conditions**, some due to the nature of open-end credit, some due to
insufficient disclosures, contribute...

...what cost. In some cases, this insurance may
be marketed in conjunction with notification and **cancellation** services
that may be of some ...of consumer credit, are marketed across state lines
by
banks that take advantage of favorable **conditions** in some states to

create an interstate market.

In the past, we have opposed federal...

...cap will unduly restrict consumer credit. A cap that rises and falls flexibly with market **conditions** provides consumers and credit card offerers with balanced protections and should not unduly affect credit availability.

Even a fixed-rate cap, under proper **conditions**, will not restrict access to credit. The effect of Connecticut's reduction of its interest...

...interest rate ceiling is established, Congress should be careful to insure that other charges or **conditions** cannot be changed to thwart the intent of such a ceiling. There is probably little...

...application for a credit card to have a standardized table showing fees, interest rates, and **conditions** under which fees or interest may be charged. The table should include all ways in...

Regulation Must Yield Market Responsiveness, Flexibility: International Banking Laws Should Safeguard Financial Stability, Realistic Balance Sheet

American Banker - March 26, 1982, Friday; Pg. 12

WORD COUNT: 2,088

BYLINE:

By HARRY TAYLOR, President, Manufacturers Hanover Corporation, New York, N.Y.

TEXT:

...market responsiveness banks require to do their jobs well.

They fall under three headings: ownership **limitations** ; restrictions on the asset side; and restrictions on the liability side.

Ownership **limitations** run the full gamut. At the one end are banks totally owned by government and...

... lending activities are directed by government to achieve specific political, social, and economic objectives, thereby **denying** the forces of the marketplace.

At the other end is the ostensibly free market system...

... today, by virtue of grandfathering and allowed foreign banks to make acquisitions that would be **denied** indigenous institutions, still gives foreign banks a favored status.

Restrictions on the asset side include...

... true equity but, under present fiscal policies, are more difficult to market, except to a **limited number** of institutions which can with advantage **use** franked income or its equivalent.

At first blush, it might appear that this proposal would...

...ABSTRACT: by the Supreme Court's recent decision in *Field vs. Mans*. The theoretical and practical **limitations** of the misrepresentation/reliance model as the test for nondischargeable credit card fraud are highlighted...

... recent decision in *Field v. Mans*.⁹ This Part points out the theoretical and practical **limitations** of the misrepresentation/reliance model as the test for nondischargeable credit card fraud. Part IV...

...despite its recent market acceptance, is humiliating and stressful for most people.¹⁵

In any **event**, there is a widespread perception, shared by many bankruptcy judges, that defaults on credit card...with the restriction in Sec 523(a)(2) that misstatements respecting the debtor's financial **condition** must be in writing to warrant nondischargeability of fraudulently incurred debt.^{sl} It is difficult...

...see how a representation of ability to pay does not implicate the debtor's financial **condition**. Therefore, the misrepresentation of ability to pay can survive as a basis for nondischargeability...

...chose in 523(a)(2) not to punish a debtor who lied about her financial **condition** (but not in writing) to induce a loan or transfer, what justification is there for...

...test to "actual fraud" appeared to many courts to mandate application of that test to **credit card** misuse as well as to **prescribe** standards for **employing** the test. Most **credit card** opinions since *Field v. Mans* have invoked it as a source of both inspiration...

...view card issuers as willing to lend to almost anyone without regard to their financial **condition** or ability to pay.⁹⁰ The issuers' attempts to deprive these casualties of the issuers...

...industry that seeks customers who will spend more than their means requests that discharge be **denied** to these customers because of an implied promise (which courts must infer) not to...a consumer's "credit score" or otherwise monitor the consumer's credit.¹²³

In any **event**, issuers attempt to control risk of loss primarily by statistical tools with much less attention...

...of between \$9,000 and \$9,500 a year. Nevertheless, the creditor issued her a **credit card** with a \$7,700 credit **limit**. She **used** the card for some time without abuse, but a few months prior to filing her...doubtful that subsection (C) should be read to make "loading up" nondischargeable in the unlikely **event** that the issuer made the loan or advance knowing that the debtor intended to wipe out the obligation in bankruptcy. In that **event** the issuer should probably not be rewarded with a nondischargeable claim despite the debtor's...

...focusing narrowly and exclusively on intent to pay.

In Feld the debtor had been certified **disabled** because of crippling emotional and mental problems. There was small prospect that she could supple...

...about it with nondischargeability under 523(a)(2) as their only weapon.

C. SUMMARY OF **LIMITATIONS** OF MISREPRESENTATION/RELIANCE TEST

The courts' efforts to fit the reliance component of the misrepresentation/reliance test to credit card misuse under 523(a)(2)(A) dramatize the test's **limitations** for that task. Since there is no actual causation, courts which focus on penalizing the...or actual fraud, other than a statement respecting the debtor's or an insiders financial **condition**.

To cope with difficult market **conditions**, Pemex hopes to go to the floating-rate and bank markets. Gilda Rota, international press...

...in 1994/5?

We intend to issue around \$1.5 billion in 1994, if market **conditions** are favourable.

How much of this total will be used to refinance maturing issues?

\$354...Why?

The fixed-rate markets have been more difficult than last year because of market **conditions**.

How do you plan to get around these difficulties?

By going to the floating-rate...

...which allows for a well-defined and calculated strategy which views tapping the markets when **conditions** are particularly favourable.

PROVINCE OF QUEBEC

Cash and prefunding have helped Quebec's position, Canada...set targets?

Yes, but they can be changed over time due to demand and market **conditions**.

How do you intend to achieve these?

By good planning, flexibility and awareness of market...

...financing. Following the slackening of the EMS and the third devaluation of the peseta, market **conditions** allowed us to overfund ourselves quite considerably.

Last December, we deliberately borrowed heavily in fixed...diversify

funding sources and, as before, we are working to price correctly according to market **conditions** .

What do you consider to be your core currencies?

Since we desire stable funding for...

...large amounts of low costs as smoothly as possible. When a new currency meets these **conditions** , we will
